

Millaclean™ Rubber Mill Cleaner

Millaclean is a Millathane millable polyurethane material developed for cleaning mill rolls.

Millaclean contains an abrasive material which removes residues of sticky materials from your mills. It can be used multiple times without losing its cleaning ability.

General Instruction for use

Millaclean can be used on cool or warm mills. If the material is very stiff, warm before using, or cut into small pieces before passing through mill. You can band Millaclean on the mill on the opposite roll that requires cleaning (if front roll has material stuck to it, band Millaclean on the mill back roll). You can also roll Millaclean into a pig, and continue passing Millaclean through mill. Although Millaclean can be banded on the mill, passing the rubber through the mill, rolling into a pig, and repeating as necessary generally works best.

Millaclean is not recommended for use in internal mixers or extruders!

Typical Properties

Density/cc at 25°C	1.50-1.75
Physical Form	Solid Gritty Sheet
Package Size	5 lbs. (2.27 kg)
	50 lbs.(22.7 kg)
Shelf Life	3 years from date of manufacture

General guidelines on Millaclean quantity needed to clean:

- 12" lab mill -----1 to 2 lbs.
- 16" lab mill-----3 to 5 lbs.
- 48" mill-----10 to 15 lbs.
- 60" mill-----20 to 25 lbs.

Note: Due to the abrasive material contained in Millaclean, there may be a slight residue of this material on mill rolls (or in the mill pan) after using Millaclean. This material can easily be removed by wiping the mill rolls with a cloth or passing rubber through the mill.
